

465

terrawatt hours of renewable power sourced by companies in 2017 - close to the electricity demand of France.

50+

companies now source 100% of their power from renewables. More than 200 source at least half their power from renewables.

75

countries with corporate sourcing practices taking place (not including self-generation).

Corporate Sourcing of Renewables: Market and Industry Trends

The numbers behind the growth

64%

of the world's end-use of electricity is consumed by the commercial and industrial sector.

24%

of the financial sector's power needs met by renewables.

2 410

large companies around the world analysed as part of this IRENA study.

3.5%

of total electricity demand in commercial and industrial sectors is actively sourced through renewables.

17%

of companies surveyed have a renewable electricity target in place. Three quarters of these targets will expire by 2020.
